

AT1 Bank Securities: Latest Developments Reassure

Scope
Ratings

Since its beginnings in 2013, the AT1 market continues to grow and mature. While there was some market turbulence at the beginning of the year, large European banks have been able to tap the market. Issuers are well aware of where they need to be with their capital positions in order to maintain investor confidence. And on the regulatory front, there are moves to support the asset class.

Capital positions continue to strengthen

During 2Q 2016, most banks strengthened their CET1 capital positions, with several banks achieving more than 25 bps compared to 1Q 2016 (Appendix I). In addition to earnings retention, banks continue to closely manage their RWAs. Capital build was also supported by asset disposals, particularly for those banks in the midst of restructuring programs.

Ongoing Pillar 2 discussions likely to be supportive

Over the last six months there has been continuing news flow about the softening of Pillar 2 measures. We review what has happened and what has actually changed, noting that the process is ongoing.

Positively for AT1 investors, it is clear that the ECB as supervisor will split Pillar 2 into two components – one that is required and one that is considered guidance. This means that on the whole banks next year should have more headroom before breaching combined buffer requirements. Other supportive changes may be forthcoming such as the explicit prioritization of AT1 coupons over dividends and discretionary compensation.

Clarification on specific issues

On 9 March a note titled “*Clarifying aspects of Pillar 2 capital requirements, Pillar 2 capital guidance and automatic restrictions on earnings distribution in the context of the CRR/CRD review*” was sent to the European Commission’s Expert Group on Banking, Payments and Insurance (EGBPI) for comment. Comprised of experts appointed by member states, the EGBPI provides advice and expertise in the preparation of draft delegated acts (acts supplementing or amending certain non-essential elements of a basic act).

It is our understanding that the note originated from the Directorate-General for Financial Stability, Financial Services and Capital Markets Union (DG FISMA), one of the Directorates-General and specialised services making up the Commission, with responsibility for initiating and implementing policy in the area of Banking and Finance.

The note identified uncertainties in the interpretation of the rules and use of Pillar 2 measures. With the aim of improving consistency across jurisdictions and certainty for banks and the market, the note clarified specific issues (see below). As well, the note established a basis for a more formal clarification of these issues by the Commission via legislative proposals, if deemed appropriate.

- **The stacking order of capital requirements** to be: Pillar 1 capital requirement, Pillar 2 capital requirement, capital buffers requirement and Pillar 2 capital guidance.
- **The distinction between Pillar 1** capital requirements which are applicable to all banks **and Pillar 2** capital requirements which are bank specific.

Bloomberg: SCOP

- **The difference between Pillar 2 capital requirements and Pillar 2 capital guidance.** Pillar 2 capital requirements are only for risks not covered or sufficiently covered by Pillar 1 and buffers requirements; duly justified to the banks; must be met at all times and subject to public disclosure. Pillar 2 capital guidance implies an expectation that the bank have additional capital to ensure that capital requirements are met at all times.
- **The maximum distributable amount (MDA) calculation:** Pillar 2 capital requirements should be included in the calculation but not Pillar 2 capital guidance. Further, AT1 instruments should be given priority if distributions have to be limited as a result of the MDA calculation.

Under SREP, Pillar 2 to be split

Subsequently, on 1 July the EBA communicated that the Supervisory Review and Evaluation Process (SREP) decisions for 2016 will be comprised of a Pillar 2 requirement and a Pillar 2 guidance. The results of the EBA/ECB 2016 stress test were an important input for the SREP process which will be finalised by end-2016. While banks are expected to meet Pillar 2 guidance (which sits on top of minimum and additional requirements and buffers) a breach does not result in automatic supervisory action and will not be used to determine the MDA trigger.

Possible modifications to CRR/CRD framework under discussion

Last month, a discussion paper exploring options for a possible clarification of EU rules concerning Pillar 2 own funds requirements was circulated amongst the EGBPI. We note that the mentioned options would support and legislate the clarifications raised in March. The possible modifications to the current CRR/CRD framework under discussion may eventually be approved and adopted by the European Parliament. Key points raised for consideration in the discussion paper include:

- **Supervisory powers**

Exclude capital guidance from the list of supervisory powers in order to avoid confusion regarding the nature of guidance.

- **Additional own funds requirements**

Explicitly clarify under which cases additional capital requirements can be imposed. The materiality of risks is also a consideration. Risks subject to grandfathering provisions or transitional treatment under CRR/CRD should be excluded.

Establish a methodology where supervisors justify their decisions and risks and capital shortfalls are measured. As well, the paper considers whether additional own funds requirements should be met with at least 75% of Tier 1 capital and at least 56.25% of CET1 capital. Currently, Pillar 2 requirements must be met entirely with CET1 capital.

- **Guidance on additional own funds**

Suggests that setting a target level of capital should be in the first place up to the bank. However, competent authorities should review these internal levels and may expect adjustments if warranted.

- **Stacking order of capital requirements**

Where AT1 and Tier 2 capital is insufficient to meet Pillar 1 and 2 requirements, CET1 capital available to meet the combined buffer requirement should be used to meet the shortfall.

- **Restrictions on distributions (MDA)**

To determine whether the combined buffer requirement has been met, CET1 capital needed to meet Pillar 2 capital and MREL requirements should also be considered. The current text refers only to Pillar 1 requirements. While the inclusion of Pillar 2 capital requirements would be line with the supervisory approach taken by the ECB, the inclusion of MREL requirements could potentially raise the MDA trigger level.

- **CET1 instruments**

In order to give preference to AT1 instruments when MDA restrictions are in effect, it could be clarified that in order for an instrument to qualify as CET1 capital, distributions on this instrument are paid after all legal and contractual obligations have been met, including payments on non-CET1 own funds instruments (such as AT1 coupons).

- **Disclosure of capital requirements**

Obligatory disclosure of Pillar 2 capital requirements but not Pillar 2 guidance. Currently, supervisors can ask banks to disclose their requirements but it is not required.

Appendix I: CET1 capital positions and headroom to trigger levels
